

Practice Questions

1. Write a Python program to add two numbers using arithmetic operators.
2. Write a Python program to subtract marks obtained from total marks.
3. Write a Python program to multiply product price with quantity.
4. Write a Python program to divide total salary among employees.
5. Write a Python program to find remainder when 57 is divided by 4.
6. Write a Python program to find floor division of 125 by 6.
7. Write a Python program to calculate power of a number using exponent operator.
8. Write a Python program to increase wallet balance using += operator.
9. Write a Python program to decrease mobile battery percentage using -= operator.
10. Write a Python program to multiply bonus points using *= operator.
11. Write a Python program to divide amount using /= operator.
12. Write a Python program to compare two ages using > operator.
13. Write a Python program to compare two salaries using < operator.
14. Write a Python program to check whether two passwords are equal using == operator.
15. Write a Python program to check whether two city names are not equal using != operator.
16. Write a Python program to check eligibility for voting using >= operator.
17. Write a Python program to check speed limit using <= operator.
18. Write a Python program using logical AND operator to check whether a student passed all subjects.
19. Write a Python program using logical OR operator to check login with username or email.

20. Write a Python program using NOT operator to reverse a Boolean value.
21. Write a Python program to check whether "Python" exists in a list using in operator.
22. Write a Python program to check whether "Orange" is not present in a list using not in operator.
23. Write a Python program to compare two lists using is operator.
24. Write a Python program to compare memory locations using is not operator.
25. Write a Python program to perform bitwise AND, OR, XOR, left shift, and right shift operations.
